KYOSK

Commercial Proposal – Transforma™ Bulk Upload for FIRS MBS

High-Confidence Bulk e-Invoicing (FIRS MBS) via CSV/Excel Upload
Prepared By: WestMetro Limited (WML)
Date: November 2025
Validity: 30 Days
Currency: Nigerian Naira (₦) | VAT Exclusive

---

1. Executive Summary

Kyosk requires a reliable, low-friction way to submit invoices to FIRS via bulk upload, without building a full middleware platform or heavily modifying existing systems.

WestMetro Limited (WML) proposes **Transforma™ Bulk Upload**, a CSV/Excel-based bulk e-invoicing solution for FIRS MBS, packaged into two commercial options within a single proposal:

- **Option 1 – Guided Bulk Upload (Recommended)**
- **Option 2 – Self-Managed Bulk Upload (Template Only)**

Both options are structured as **one-time all-inclusive engagements for the first year**, so you get a clear, predictable cost for Year 1, with optional monthly arrangements available from Year 2 onwards.

---

2. Objectives & Requirements

Kyosk's key objectives are:

- To become and remain **compliant with FIRS MBS** using bulk CSV/Excel uploads.
- To **avoid disruptive or expensive ERP changes**.
- To **minimise manual rework** by catching common data and structure issues early.
- To have a clear path for **ongoing refinements** as FIRS rules evolve and new error patterns appear.

The solution must:

- Accept CSV/Excel export files from Kyosk's existing systems.
- Validate fields (TIN, invoice date, amounts, tax elements, etc.) before submission.
- Transform data into a **FIRS-ready bulk upload format**.
- Provide a path for **AI-assisted suggestions** for HSN codes, postal codes and product categories where data is missing or incomplete (Option 1).
- Support **continuous improvement** as new edge cases and reject patterns arise (Option 1).

---

3. Proposed Solution – Transforma™ Bulk Upload

Transforma™ Bulk Upload is a **file-based interface** that:

1. Accepts CSV/Excel files following an agreed Kyosk bulk format.
2. Runs validation, transformation and enrichment scripts on each row.
3. Produces a **FIRS-compliant bulk-upload file** (or directly pushes to a connected engine, if applicable).
4. Logs errors and warnings for follow-up by Kyosk's team.

The difference between **Option 1** and **Option 2** is the level of **guidance, scripting, AI enrichment and continuous improvement** provided by WML.

---

4. Option 1 – Guided Bulk Upload (Recommended)

4.1 Scope of Work

Under Option 1, WML provides a **full-service, guided implementation**:

1. CSV / Bulk Export Analysis & Mapping

- Analyse Kyosk's existing CSV/Excel exports (or sample files).
- Design the required **field mapping** from Kyosk's structure into the agreed Transforma bulk format.
- Define validation and transformation rules for key fields (e.g. TIN, invoice numbers, dates, amounts, tax elements).

2. Transformation Scripting

Build and maintain the scripts that:

- Read Kyosk's CSV/Excel format.
- Perform structural validation and basic sanity checks.
- Transform each row into a **FIRS-ready bulk upload** row.
- Produce error/warning logs for rejected or suspicious entries.

3. AI-Assisted Data Enrichment (Where Data is Available)

- **HSN mapping suggestions** based on product descriptions and any existing codes.
- **Postal code suggestions** where address fields are present but incomplete.
- **Product category suggestions** where no category is present, using AI to propose categories that Kyosk can confirm or override.

> *These AI suggestions are always advisory; your team retains final control over accepted values.*

4. Tuning Cycles – Continuous Improvement (4 Cycles in 12 Months)

Over the first 12 months, WML will run up to **four (4) tuning cycles**. Each tuning cycle includes:

- Reviewing recent error patterns, rejects and edge cases from your bulk uploads.
- Updating the transformation scripts to handle those patterns more gracefully.

- Adding new validations and checks (e.g. additional sanity checks on totals, taxes, missing or inconsistent fields).
- Updating the bulk template and "how-to" guide where needed.
- A short review call or summary with Kyosk's team to walk through the changes.

> ***Important:*** *Adjustments needed because FIRS changes its rules, formats or payloads are treated as standard and will be handled as part of the engagement; they do* ***not*** *count against your four tuning cycles.*

5. Initial Go-Live Support

- Assist with test uploads.
- Confirm that FIRS accepts the data structure.
- Help Kyosk's team stabilise the internal preparation process for the first production cycles.

4.2 What Kyosk Provides

- Existing CSV/Excel export samples (or structured mock data).
- A designated contact from Finance/Accounts who understands the invoice fields.
- A nominated technical contact who will run the scripts and handle the file movements.

---

5. Option 2 – Self-Managed Bulk Upload (Template Only)

5.1 Scope of Work

Under Option 2, WML provides a **lean, self-managed path**:

1. **FIRS-Compliant Bulk Template**
    1. A CSV/Excel template with the required FIRS-compatible columns and basic field descriptions.
2. **One-Time Onboarding / Orientation**
    1. A short orientation session (or guide) explaining:
        - How to populate the template correctly.
        - Typical FIRS expectations for each field.
        - How to structure the final file for upload.

5.2 What is Not Included in Option 2

Under Option 2, **Kyosk's internal team** will be responsible for:

- Data analysis & mapping from existing exports into the template.
- Building any internal scripts or processes to generate the bulk files.
- Any **AI-assisted enrichment** (HSN, postal code, product category) – Option 2 does *not* include AI or tuning.
- All continuous improvement work, such as:
    - Analysing rejects and error patterns.
    - Updating scripts and validation rules.
    - Adding new checks for edge cases.

Option 2 is ideal where Kyosk has **in-house capacity** and wants to **minimise external consulting cost**, accepting that more work will be done internally.

---

6. Implementation Approach & Timeline

6.1 High-Level Approach (Option 1)

1. Discovery & Sample Review
    1. Collect sample CSV/Excel exports and clarifications on tax/treatment logic.
2. Mapping & Script Design
    1. Design mapping tables and transformation rules.
    2. Implement initial scripts and template.
3. Testing & Refinement
    1. Run test batches, review errors and edge cases.
    2. Adjust scripts for stability.
4. Go-Live & Tuning Cycles
    1. Move into live use.
    2. Execute up to four tuning cycles across the first 12 months.

6.2 Timelines

Option 1 – Guided Bulk Upload (Recommended)

- Initial implementation, testing and first live upload will be completed **within 1 week** of formal kick-off, subject to:
    - Receipt of sample CSV/Excel files, and
    - Availability of the nominated Kyosk contacts.

Option 2 – Self-Managed Bulk Upload (Template Only)

- Template delivery and one-time orientation will be completed **within 4 working days** of formal kick-off.

---

7. Commercial Summary

All amounts are in Nigerian Naira (₦), VAT exclusive.

7.1 Option 1 – Guided Bulk Upload (Recommended)

One-time all-inclusive fee (Year 1): **₦3,800,000**

This single envelope covers the first 12 months and combines:

- Use of the Transforma™ Bulk Upload capability for 12 months.
- Initial CSV/Excel data analysis and mapping of Kyosk's exports.
- Transformation scripting to generate FIRS-ready bulk uploads.
- AI-assisted enrichment for HSN, postal code, and product category suggestions (where data is available).
- Up to four (4) tuning cycles in the first 12 months for continuous improvement.
- Standard updates to keep pace with FIRS rule changes or payload adjustments during the first year.

There is **no separate SaaS vs implementation line** here: everything listed above is included in the **₦3,800,000 envelope for Year 1**.

From Year 2 onwards (optional):

- Should Kyosk wish WML to continue providing updates, light support and periodic tuning beyond Year 1, the **reference rate is ₦350,000 per month** (VAT exclusive).
- Exact Year 2+ scope and terms can be finalised closer to renewal.

7.2 Option 2 – Self-Managed Bulk Upload (Template Only)

One-time all-inclusive fee (Year 1): **₦2,500,000**

This envelope includes:

- A FIRS-compliant bulk Excel/CSV template for invoice uploads.

- A one-time onboarding/orientation session or guide.
- Minor clarifications during initial use (within reasonable bounds), but **no ongoing tuning or scripting work**.

It does **not** include:

- Data analysis & mapping of Kyosk's current exports.
- Transformation scripting or automation.
- AI-assisted enrichment.
- Tuning cycles or continuous improvement services.
- Ongoing consultation beyond initial orientation.

All ongoing work and improvements are handled **internally by Kyosk** under Option 2.

From Year 2 onwards (optional):

- If Kyosk wants WML to maintain the template, align with future FIRS changes and provide occasional orientation refreshers, the **reference rate is ₦250,000 per month** (VAT exclusive), with detailed scope to be agreed.

7.3 Payment Terms (Both Options)

- **60% – Mobilisation** (upon acceptance and signing).
- **25% –** After successful completion of initial testing and first successful bulk upload (Option 1) or successful template walk-through (Option 2).
- **15% –** Upon confirmation of stabilised use in production (Option 1) or after the first full cycle of use (Option 2).

VAT at **7.5%** will be applied separately as required by law.

---

8. Next Steps

1. **Option Selection**
    1. Kyosk confirms whether it prefers:
        - **Option 1 – Guided Bulk Upload (Recommended)**, or
        - **Option 2 – Self-Managed Bulk Upload (Template Only)**.
2. **Engagement Confirmation**
    1. Sign-off on commercial terms and this proposal.
3. **Kick-Off**
    1. Appointment of Kyosk's technical and finance contacts.
    2. Provision of sample CSV/Excel files (for Option 1).
4. **Implementation**
    1. WML executes the agreed option within the stated implementation timelines (1 week for Option 1; 4 working days for Option 2).
5. **Go-Live & Stabilisation**
    1. Kyosk begins routine use of the bulk upload flow.
    2. For Option 1, tuning cycles are scheduled and executed over the first 12 months.
