BI-COURTNEY AVIATION SERVICES LIMITED (MMA2)
Commercial Proposal for Helium™ Professional Middleware

- Transforma™ Bulk Upload for Parking (Balosh Integration)

Microsoft Dynamics 365–Integrated FIRS e-Invoicing (MBS) Compliance Layer
Core AR/AP (D365) + High-Volume B2C Parking Tickets

Prepared By: WestMetro Limited (WML)
Date: November 2025
Validity: 30 Days
Currency: Nigerian Naira (₦) | VAT Exclusive

Confidential – For Bi-Courtney Internal Review Only

---

1. Executive Summary

Bi-Courtney Aviation Services Limited (BASL), operators of the Murtala Muhammed Airport Terminal 2 (MMA2), requires a durable and scalable compliance solution for the FIRS e-Invoicing / Merchant Buyer Solution (MBS) mandate, across:

- **Core AR/AP invoices** generated from **Microsoft Dynamics 365** (mostly B2B / internal invoices, ~100 per month), and
- **High-volume B2C parking tickets** (~50,000 per month, with headroom up to 80,000), generated through the **Balosh Parking solution**.

To address this, WestMetro Limited (WML) proposes:

1. **Helium™ Professional** – a middleware compliance layer deployed within Bi-Courtney's environment and **integrated directly to Microsoft Dynamics 365**, to handle **core AR/AP e-invoicing**, including:
   - Broader FIRS **document-type coverage** (beyond simple commercial/debit/credit notes).
   - Support for more **tax categories** and airport-related charges.
   - Deeper **audit trails**, exception tracking and compliance narratives.
   - Ongoing **compliance consultations** to help Bi-Courtney sustain a high FIRS compliance score.
2. **Transforma™ Bulk Upload – Parking Edition** – a dedicated, metered bulk-upload channel for **Balosh parking tickets**, integrated to Helium and FIRS MBS, with:
   - A provisioned allowance of **up to 80,000 parking tickets per month**, and
   - A clear, predictable overage model for exceptional months.

All invoices and parking tickets feed into a **unified compliance dashboard**, giving Bi-Courtney Finance, Internal Audit and IT a single view of MBS compliance.

For Bi-Courtney, WestMetro is offering a **single consolidated annual maintenance fee of ₦3,500,000** which covers both **Helium Professional (core AR/AP)** and the **Transforma Bulk Upload module for parking**, as a **volume incentive for the first three (3) years**.

---

2. Understanding of Requirements

2.1 Business & Operational Needs

- Full compliance with FIRS MBS across **all relevant document types**, not only standard B2B invoices.

- Clear separation between:
  - **Core AR/AP invoices from Microsoft Dynamics 365** (lower volume, high business impact, higher PII), and
  - **Parking tickets** (very high volume, low PII, operationally sensitive but fiscally simpler).
- A compliance architecture that:
  - Integrates **cleanly with D365** (current finance/ERP platform).
  - Does **not overbuild** infrastructure for non-sensitive parking data.
  - Keeps future system changes (e.g. D365 extensions, additional modules) manageable.

2.2 Technical & Compliance Expectations

- Middleware that can manage:
  - Multiple FIRS document types (commercial, debit, credit, self-billed, internal charge documents, concession/settlement documents, etc.).
  - Multiple tax categories (VAT, WHT and airport-specific levies/fees/service charges).
  - Rich **audit trails** and commentary to support internal and external audits and compliance scoring.
- A parking pipeline that:
  - Integrates with **Balosh Parking solution** via export or API.
  - Efficiently pushes high-volume B2C tickets to FIRS without impacting D365 performance.
  - Enables IRN and QR stamping on parking receipts.

2.3 What Bi-Courtney Requested

- A proposal based on:
  - **Total average 50,100 invoices/month** (100 D365 AR/AP + 50,000 parking tickets), and
  - A proposal assuming **parking is excluded** (100 invoices/month only).
- Clear articulation of:
  - What happens when monthly invoice volumes **exceed the agreed average**.
  - Two architectural/commercial **options**:
    - **Option A:** Balosh system extended to handshake with WML.
    - **Option B:** WML manages the parking-related processes in their entirety.

---

3. Helium™ Professional Overview (D365-Integrated)

Helium™ is a secure compliance engine deployed in Bi-Courtney's environment and **integrated to Microsoft Dynamics 365**. It acts as the **single integration point** between D365 and the FIRS MBS platform, responsible for:

- FIRS-compliant **UBL transformation** for invoices originating in D365.
- Validation and schema enforcement across multiple FIRS document types.
- Local IRN & QR payload generation (aligned with FIRS specification).
- Submission to FIRS and handling of acknowledgements.
- Retry engine + safe queues for failures.
- Extended **audit trails**, including comments and compliance notes.
- Compliance dashboards and reports for Finance, Tax and IT teams.

Why Helium™ Professional for Bi-Courtney

For Bi-Courtney, the choice of **Helium Professional** is driven less by volume and more by **compliance depth**, specifically:

- Need to support **more FIRS document types** beyond standard invoices and credit/debit notes (e.g. internal charge notes, certain settlement or concession documents).
- Requirement to handle **more tax categories** and combinations relevant to an airport operator (VAT, WHT, service charges, levies).
- Desire for **richer audit trails**, configurable compliance fields and advisory support to maintain a strong FIRS compliance score over time.

Professional therefore provides the right balance of **document coverage, tax depth and auditability** for an airport operator using **Microsoft Dynamics 365**, without forcing Bi-Courtney into an oversized Enterprise tier.

---

4. Transforma™ Bulk Upload

Transforma™ Bulk Upload is a dedicated high-volume interface for **Balosh parking tickets**, designed to:

- Ingest parking data via:
  - Scheduled file exports (CSV/Excel) from Balosh, and/or
  - API calls from Balosh into a WML **Bulk Endpoint**.
- Validate and transform tickets into FIRS-compliant B2C documents.
- Submit batches to FIRS via Helium and receive acknowledgements.
- Make IRN/QR payloads available back to Balosh so the **FIRS QR** can be printed on the parking receipts.

For Bi-Courtney, Transforma Bulk Upload (Parking Edition):

- Is **provisioned up to 80,000 tickets per calendar month**.
- Includes the configuration of a **Bulk Endpoint** for up to **80,000 API calls per month** from Balosh or Bi-Courtney systems.
- Is commercially separated from the Helium Professional license so that **parking volume does not force a Helium tier upgrade**.

---

5. Parking Options – Option A vs Option B

Option A – Balosh Handshake (Integration + Bulk Endpoint)

Under this option:

- Balosh remains fully responsible for the **parking front-end** and on-ground operations.
- WML will:
  - Integrate with Balosh via secure file/API exports.
  - Provision and configure the **Transforma Bulk Endpoint** for up to **80,000 parking tickets per month**.
  - Perform ticket validation, transformation, MBS submission, and IRN/QR payload generation.
- Balosh will update receipts to display the **FIRS-compliant QR code** using data provided from Helium/Transforma.

Commercially:
Option A is covered by a **one-off implementation fee of ₦5,500,000** for the parking component.

Option B – WML-Managed Parking MBS Lifecycle (Option A + Extended RACI)

Under this option:

- All activities in **Option A** are included, and in addition WML will:
  - Take a more active role in **data-mapping and enablement** for Balosh parking data.
  - Define and implement **validation, enrichment and exception-handling rules** for parking (errors, retries, rejects, reconciliation) under a clearly documented **RACI**.
  - Provide more structured **compliance reporting** for parking (daily/weekly/monthly exceptions and reconciliation views).

Commercially:
Option B incurs:

- The base parking fee of **₦5,500,000**, plus
- An **additional ₦2,500,000** for extended responsibility and enablement.

Total parking implementation fee under Option B = **₦8,000,000**.

---

6. Scope of Work & Deliverables

6.1 Helium™ Professional (Core AR/AP – Dynamics 365)

Scope

- Analysis of Bi-Courtney's current AR/AP invoice structures in **Microsoft Dynamics 365**.
- Mapping to FIRS UBL schemas, including additional contextual fields required for airport operations.
- Configuration of supported FIRS document types (commercial, debit, credit, self-billed, selected internal documents, etc.).
- Tax logic configuration:
  - VAT, WHT
  - Airport levies / charges as mutually agreed fields.
- Deployment of Helium middleware connected to D365.
- Setup of compliance dashboards and core reports.

Key Deliverables

- Helium middleware engine installed and integrated with D365.
- Document type definitions and mapping templates.
- Tax logic module with Bi-Courtney-specific rules.
- Local IRN/QR generator.
- Immutable audit ledger for all submissions.
- Compliance dashboard for Finance, Tax and IT.
- Integration and data-dictionary documentation.

6.2 Transforma™ Bulk Upload – Parking (Option A / Option B)

Scope (Common to Both Options)

- Parking data analysis and mapping (Balosh → FIRS UBL B2C).
- Configuration of the **Bulk Endpoint** for up to 80,000 tickets/month.
- Transformation scripts and validation rules for parking tickets.
- Parking-specific dashboards (volumes, rejects, reconciliation views).
- IRN/QR feedback mechanism back to Balosh for receipts.

Additional Scope (Option B Only)

- Extended data-mapping and enablement workshops.
- Process definition for:
  - Error queues
  - Retry schedules
  - Reconciliation with Balosh and Bi-Courtney internal reports.
- Agreed **RACI** for daily/weekly monitoring of parking submissions.

---

7. Implementation Timeline (Indicative 8–10 Weeks)

Phase	Timeline (Indicative)	Key Activities
Requirements & Discovery	Week 1–2	Confirm in-scope docs, tax categories, parking volumes, Balosh & D365 touchpoints
Helium Setup	Week 3–4	Deploy Helium, configure D365 mappings, tax logic, dashboards
Parking Bulk Design	Week 4–5	Parking data mapping, Bulk Endpoint design, agree Option A or B
Development & Testing	Week 5–7	Build scripts, validate AR/AP and parking flows, internal tests
UAT	Week 8	Joint testing with Bi-Courtney (core + parking)
Go-Live & Hypercare	Week 9–10	Production cut-over, initial monitoring, training & knowledge transfer

Exact dates and durations will be confirmed in a **joint project plan** after contract signature.

8. Commercial Summary

All figures are in Nigerian Naira (₦), exclusive of VAT.

8.1 Scenario 1 – Helium Professional Only

(100 Core AR/AP Invoices per Month, Parking Excluded)

Item	Description	Amount (₦)
Helium™ Professional – Implementation	Core AR/AP integration with D365, doc types, tax logic, dashboards	**16,500,000**
Annual Maintenance & Support (Year 1, consolidated)	Helium Pro platform, D365 connector, support & minor adjustments	**3,500,000**
Total Year 1 Cost (Scenario 1)	Implementation + Year 1 maintenance	**20,000,000**

> ***Note:*** *Maintenance structure and multi-year terms (escalation, renewal, scope) will be refined and agreed in the final SLA. The ₦3,500,000 figure is the consolidated Year 1 value being extended as a* ***volume incentive*** *for the first three years.*

8.2 Scenario 2 – Helium Professional + Parking

(100 Core AR/AP Invoices + 50,000–80,000 Parking Tickets per Month)

Scenario 2A – Option A (Balosh Handshake)

Item	Description	Amount (₦)
Helium™ Professional – Implementation	As in Scenario 1 (D365 integration, tax logic, dashboards)	**16,500,000**
Transforma™ Bulk Upload – Parking (Option A)	Bulk Endpoint (up to 80,000 tickets/month) + Balosh integration + QR enablement	**5,500,000**
Annual Maintenance & Support (Year 1, consolidated)	Helium Pro + Transforma Bulk module	**3,500,000**
Total Year 1 Cost (Scenario 2A)	Implementation + Year 1 maintenance	**25,500,000**

Scenario 2B – Option B (WML-Managed Parking Lifecycle)

Item	Description	Amount (₦)
Helium™ Professional – Implementation	As in Scenario 1 (D365 integration, tax logic, dashboards)	**16,500,000**
Transforma™ Bulk Upload – Parking (Option B)	Option A scope + extended data-mapping, enablement & managed lifecycle (RACI)	**8,000,000**
Annual Maintenance & Support (Year 1, consolidated)	Helium Pro + Transforma Bulk module	**3,500,000**
Total Year 1 Cost (Scenario 2B)	Implementation + Year 1 maintenance	**28,000,000**

> *As with Scenario 1, the multi-year maintenance terms can be fine-tuned in the final SLA. The key principle is a* ***single consolidated maintenance fee of ₦3,500,000 per year*** *covering both Helium Pro and the parking bulk module for the first three years.*

8.3 Parking Volume & Overage Policy (Transforma Bulk Upload Only)

The **Transforma Bulk Upload – Parking** module is:

- **Provisioned for up to 80,000 parking tickets per calendar month** sent via the Bulk Endpoint.

In any month where the total number of parking tickets submitted exceeds 80,000:

- An **overage fee of ₦350,000** applies for each additional block of **10,000 tickets (or part thereof)**.

Examples

- 75,000 tickets → within 80,000 → **no overage**.
- 87,000 tickets → 7,000 above 80,000 → **one block of 10,000** → **₦350,000 overage**.
- 101,000 tickets → 21,000 above 80,000 → **three blocks of 10,000** → **₦1,050,000 overage**.

These overage rules apply **only to the Transforma Bulk Upload – Parking module**.
The **Helium Professional** license remains focused on core D365 AR/AP invoices and is **not affected by parking ticket volumes**.

8.4 Payment Terms

(All fees are VAT exclusive – 7.5% VAT will be applied separately.)

- **60%** – Upon signing of contract and project kickoff.
- **25%** – Upon completion of User Acceptance Testing (UAT).
- **15%** – Upon production go-live and commencement of annual support.

---

9. Key Assumptions & Responsibilities

9.1 Assumptions

- Bi-Courtney provides:
  - Access to relevant AR/AP and parking data (via D365 exports and Balosh).
  - Internal resources from Finance, Tax, IT and Operations for workshops and UAT.
- FIRS MBS specifications remain materially consistent; major regulatory changes may require scope adjustment.
- Balosh (or any successor parking system) is available and cooperative for integration and QR-related changes.
- Any future D365 module changes or new billing platforms will be scoped separately.

9.2 Responsibilities (High Level)

WML Responsibilities

- Provide Helium and Transforma architecture and implementation.
- Supply mapping templates and FIRS UBL dictionaries.
- Configure document types, tax logic and audit trails.
- Implement Bulk Endpoint and parking transformation scripts.
- Provide project management, UAT support and go-live hypercare.

Bi-Courtney Responsibilities

- Host environment provisioning for Helium.
- Provision D365 and Balosh data exports or API access.
- Provide master data (customers, products, service lines) as needed.
- Participate actively in requirements sessions and UAT.
- Approve final configurations prior to go-live.

---

10. Appendix A – Why Two Options for Parking (and Why Not a Helium Enterprise Upgrade)

Bi-Courtney can either:

- Keep parking operations fully within **Balosh + Bulk Upload** (Option A), or
- Allow WML to manage more of the parking fiscalization lifecycle (Option B).

We have **not** proposed upgrading Bi-Courtney straight to a **Helium Enterprise** tier for the parking volume, for the following reasons:

1. **Compliance Depth vs. Cost**

   Helium Professional already delivers the capabilities Bi-Courtney needs on the **core D365 AR/AP side**:

   - Support for more FIRS document types relevant to an airport operator.
   - Handling of multiple tax categories (VAT, WHT, levies, surcharges).
   - Rich audit trails and advisory support to maintain strong compliance scores.

   Pushing 50,000+ parking tickets per month into the same core Helium tier could force a move to **Enterprise**, with a much higher license and implementation cost, without bringing equivalent additional value for simple B2C parking tickets.
2. **Right-Sizing Infrastructure for Low-PII Data**

   Parking tickets typically:

   - Contain little or no identifiable personal data, and
   - Are high-volume, low-value transactions.

   Treating them like full AR/AP invoices inside Helium would require Bi-Courtney to **provision significantly larger infrastructure** to store and index millions of low-PII tickets over time. This is unnecessary for regulatory compliance and would increase both capital and operational expenditure.
3. **Avoiding Unnecessary Complexity**

   For Bi-Courtney, the level of sophistication offered by an Enterprise rule engine is not needed for parking. Using **Transforma Bulk Upload** instead:
   - Keeps Helium Professional focused on the **sensitive, higher-value D365 AR/AP invoices**.
   - Provides a simpler, scalable, and cost-effective path for **non-sensitive parking data**.
   - Still delivers unified compliance views via Helium dashboards.

In summary, the dual approach (Helium Professional for D365 AR/AP + Transforma Bulk Upload for parking) is designed to give Bi-Courtney:

- **Strong compliance coverage** across all relevant document types,
- **Lower total cost of ownership** than an Enterprise-only path, and
- Flexibility to choose between **Option A (Balosh-led)** or **Option B (WML-managed)** depending on how much operational responsibility Bi-Courtney wants WML to take on for parking.

---

11. Next Steps

1. **Scenario & Option Selection**
   - Bi-Courtney confirms preferred volume scenario:
     - Scenario 1 (100 invoices/month – no parking), or
     - Scenario 2 (100 invoices + 50,000–80,000 parking tickets/month).
   - Bi-Courtney confirms preferred parking option:
     - Option A – Balosh Handshake, or
     - Option B – WML-Managed Parking Lifecycle.
2. **Letter of Engagement (LoE) / Contract**
   - Joint review and execution of formal agreement, including commercials and timelines.
3. **Mobilisation & Project Kickoff**
   - Mobilisation payment (60%) triggers detailed planning, access provisioning, and workshop scheduling.
4. **Implementation & UAT**
   - WML and Bi-Courtney jointly execute configuration, testing, and training.
5. **Go-Live & Support**
   - Production cut-over.
   - Commencement of annual support, monitoring, and optimisation.
